

Autonomous Security Bots-Website Design Brief-24159567

by Rajveer Saini

Aim of My Website:-

The Primary aim of my website is to sell security robots as well as tell my target audience about how useful these robots can be and including its advantages. My site will cover a Home Page on which the website flow starts, a Product list page which will give the users the list of all the products we are selling right now, a About Us page which tells users about our company morales and Aims additionally telling the users about our protocols and product standards we set while selling our products along with our basic contact details, then comes a Reference page containing all the references I took from other websites in Harvard style referencing and lastly a Contact Us page which will ease up the process of contacting us directly via email.

Target Audience:-

The Target Audience of our website are especially tech companies, government, tech fests, etc. for the big projects, also tech geeks or enthusiasts as well as small shops and supermarkets for small projects.

Objectives of our site:-

1. To make my site as convenient as possible for ease of users.
2. To provide information to the point for our products.
3. To keep my design minimal and official i.e. not so flashy.
4. To provide a better Customer Support .

Designing Notes:-

Style of our site

I designed my website by keeping a check on a few things i.e. I kept the text information as clear and short as it can be in the overview so that the user does not get overwhelmed and confused. Using High quality images and graphics also has enhanced the overall user experience. Considering the balance of my website, and keeping Scalability and maintenance also a major factor, so that our future innovation can be added easily to our website .

Color Scheme, Fonts and Navigation

I tried to keep my website's theme same overall the pages and chose a simple theme which looks a bit elegant and refined. I choose my overall theme as Black inspired from Apple's website to keep my website looks rich and elegant. Keeping the font size same in the same kind of content created a unified look and feel, making my website appear more professional and cohesive. Keeping Hierarchy, Clarity and readability in mind I also changed the font sizes for differentiation in different type of content.

Navigation is also very a very important factor when it comes to convenience, by considering these factors I tried to design my website so that user can reach the desired product in a very few clicks.

Colors Used

#000000(Black) #FFFFFF (White) #BFBABA #00FFEA #333030 #D0D9D9

Interactions:-

Navigations options are quiet simple on my website. User can also navigate to homepage by clicking the company's logo. And a Hamburger menu is specially designed for mobile device users.
